

Letter of Support

for the educational project "Step to Science,"
implemented by the Department of Physics and Mathematics
of the Black Sea National University named after Petro Mohyla
within the framework of scientific research on the topic:
"Preparing a teacher of natural and mathematical disciplines
for designing an educational environment based
on STEM education principles."

The search, development, and support of creative and gifted youth in the context of military aggression in Ukraine is a relevant and complex task not only for the education system of Ukraine but also for European countries that have sheltered Ukrainian youth.

JRS Romania always supports people affected by ongoing crises or emergencies, wherever they are. JRS provides educational and livelihood programs, reconciliation efforts, as well as psychological and psychosocial support to those most affected by emergencies and protracted crises.

In response to educational challenges, JRS Romania, in collaboration with the Department of Physics and Mathematics of Petro Mohyla Black Sea National University, has implemented the "Step to Science" project throughout 2024 at the "Ostrivets" Hub. As part of the project, a STEM center was established, where the following studios operated effectively: "Discovery," "Let's Make It Together," "Renaissance," and the "Dance Studio."

The involvement of young people in educational activities within the project has significantly increased their level of social adaptation in Romania, activated their creative potential, and contributed to the development of their creative abilities. Implementing such projects facilitates the effective realization of the educational process in accordance with Ukrainian educational standards and accelerates the integration of Ukrainian youth into the European educational space.
